Important notes:

AHP Design Ltd is not a CDM coordinator, and they bear no responsibility for this specific element of work. Dimensions must be verified on-site; it is the builder's responsibility to ensure accuracy. Any discrepancies should be addressed by seeking guidance from the client's representative. The drawings and specifications serve as a guide for compliance with current building regulations. However, alternative 'similar approved' products may be considered at the discretion of the building inspector. While these guidelines facilitate compliance, they do not prescribe the exclusive means of obtaining building regulations approval. AHP Design Ltd does not assume liability for any loss or additional expenses resulting from variations to the layout or specification due to site conditions, material availability, or other circumstances. Contractors are required to confirm all dimensions and report any discrepancies to AHP Design Ltd before procuring materials or commencing work. In case of uncertainty on-site, all work must cease immediately, with notification sent to engineers and AHP Design Ltd. AHP Design Ltd bears no responsibility for structural engineering work or the conduct of third-party contractors. Structural calculations are mandatory for every project as per building control requirements. Drawings and dimensions are provided as guidelines only; while the drawings and dimensions provided offer guidance, it's important to recognise that real-world conditions may introduce variability. These drawings are intended solely for local authority approval purposes.

Proposal: Demolition of Existing Bungalow and Construction of a Mixed-Use Development

We propose to demolish the existing bungalow located at 58 The Street Beck Row and replace it with a new development that includes a retail unit on the ground floor, three residential apartments, and one office space above. This development is planned in response to the growing demand for both commercial and residential spaces in this sought-after village, which is experiencing significant growth due to numerous new housing developments and a need for housing and amenities from the local American Air Base.

Design and Aesthetics:

The proposed retail unit will be thoughtfully designed to complement the existing street scene. It will feature red bricks and black weatherboarding, ensuring it harmonises with the surrounding properties and maintains a nice character to the area. The scale and design of the building will be respectful of the village's aesthetic, ensuring it is not overpowering or out of place. The area currently features predominantly low-level buildings, and this project aims to maintain that scale with the dormer bungalow style first floor.

Parking and Accessibility:

The development will include a total of 9 parking spaces, consisting of 8 standard spaces and 1 designated disabled space, ensuring accessibility for all visitors. A loading bay will be incorporated with time constraints to minimise disruption to the surrounding area. The Existing entrance/exit will remain. The car park offers excellent visibility in both directions along the main road, ensuring smooth traffic flow and minimal disruption. The large electric pole at the front of the property will be either be relocated to the side or incorporated in the parking design, ensuring unobstructed parking and access.

Plant Area:

A dedicated plant area will be situated at the rear side of the building to accommodate necessary utilities without impacting the visual appeal of the development or street scenes.

Residential Access and Storage:

The 2 residential apartments will be accessed via side stairwells, ensuring privacy and ease of access for the residents. Alongside, there will be a bike storage area to the side of the building and parking to the rear.

Community and Economic Impact:

The new retail unit will serve the growing population, offering convenient shopping options and contributing to the local economy.

Conclusion:

In conclusion, this proposal seeks to demolish the existing bungalow and construct a thoughtfully designed mixed-use building that aligns with the character and needs of the village. It will provide valuable commercial space and much-needed residential apartments, contributing positively to the community's growth and development. The design ensures that the new building will be a harmonious addition to the village, enhancing both the aesthetic and functional aspects of the local environment.
